REST AND RECOVER – CRANIOSACRAL THERAPY

Craniosacral therapy (CST) is a gentle, noninvasive form of bodywork that addresses the bones of the head, spinal column and sacrum. The goal is to release compression in those areas, which alleviates stress and pain.

CST is most often carried out with the client lying down, fully clothed, in a quiet and peaceful environment. Treatment involves a very gentle touch of the practitioner's hands. This light contact may be applied to the cranium (head), the sacrum (tailbone), the feet, the trunk or any other part of the body as appropriate. The gentle approach of CST is entirely noninvasive.

The subtle interaction of the two systems—brought together by this light contact—stimulates and enhances self-healing mechanisms within the body to respond, release and open up to a more balanced, healthy state. CST seeks to restore the natural position of the bones and can decrease stress from chronic injuries, as well as provide relief from migraine headaches, neck and back pain, temporomandibular joint disorder (the inflammation of the joint that connects the lower jaw to the skull) and more.

Massage Add-Ons

Our therapists can now include CBD salve with any massage service. Cannabidiol (CBD) is a chemical compound, or cannabinoid, found in the hemp plant. It is a nontoxic, noneuphoric substance that works naturally with our body's own endocannabinoid system (ECS). This system plays an important role in controlling immune balance, inflammation, nerve protection and pain relief. CBD can be beneficial for many conditions, including arthritis, chronic pain, inflammation, nerve pain, skin irritation and sore muscles.
